

Companies with a solid corporate health policy like IKEA realize that natural light is fundamental for a good working environment.

"I would recommend anybody to work with Parans. Great products, great company."
 -Markus Herchet, IKEA Iberica

Natural light enhances indoor environments on many levels. Its brightness and dynamic spectrum and intensity are among the first qualities that are perceived. The long-term quality of natural illumination in a workplace lies however in the beneficial psychological and physical effects on its employees. Research shows an increase in performance of 15-40% and a decrease in absence and employee turnover of the same magnitude when adding natural light to a workplace.

In this example from IKEA in Bilbao, sunlight is brought into an office deep inside the building.

Important processes take place here during all working hours why the lack of natural light was unacceptable to the management. Parans products resolved this situation with a pleasing result to a low cost.

"We appreciate a lot working with such an innovative and future focused company like Parans. We can only recommend any company who wants to create better work atmosphere for their co-workers to contact them for any daylight issues."
 -Markus Herchet, IKEA Iberica
